
Informed Consent – Periodontal Treatment

I understand that I have a periodontal disease (gum and bone). This disease process has been explained to me and I understand it is caused by bacterial toxins. I realized that this disease may be painless and asymptomatic, but that usually symptoms such as bleeding, swelling or recession of gum tissue, loosened teeth, elongated teeth, bad breath, sensitivity and soreness may be noticed. Treatment of periodontal disease may include periodontal scaling and root planning, either as a therapeutic procedure or preliminary to more extensive treatment. Periodontal scaling and root planning is the removal of calculus, bacterial plaque, bacterial toxins, diseased cementum, and disease tissue from the inner living crevice surrounding the teeth.

I understand:

- The purpose and benefit of this procedure is to reduce some of the cause of periodontal disease to a level more manageable by my own individual immune system.
- My own efforts with home care are just as important as my professional treatment.
- Some of the conditions caused by periodontal disease are irreversible.
- Maintaining regular periodontal cleanings is essential.
- Future re-treatment of scaling and root planning may be necessary.

The consequences of doing nothing or discontinuing treatment may be, but are not limited to:

- Worsening of the disease causing increased bone loss which may lead to the need for teeth to be extracted in the future.
- Increased infection, bleeding, pain, and soreness.
- Possible systemic problems: Heart Disease, Stroke, Diabetes, Respiratory Disease etc.

The treatment risks may be, but are not limited to:

- Increased recession of the gum tissue and exposure of root surfaces as the tissue heals, and swelling decreases.
- Some pain, swelling or bruising may be experienced after treatment.
- Increased sensitivity to cold, or sweets.
- This may require further treatment, may fade with time, or may persist no matter what is done.

I understand the recommended treatment for my periodontal condition. Alternative treatment has been explained to me as well as the consequences of not receiving treatment.
