

# PatientXpress

## Updating Your Workstation

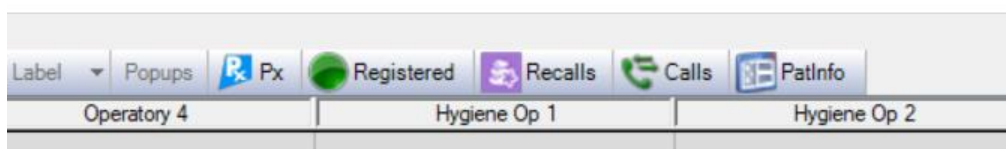

## 1. Updating PatientXpress

To verify if there is an available update, we must first launch Open Dental using the 'Run as Administrator' option.

We can right click on icon in the Toolbar or the Desktop find this option.

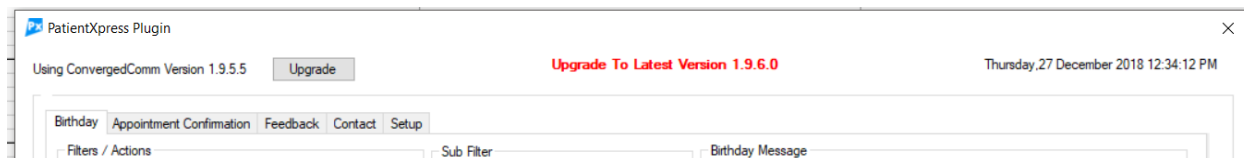

Once logged into Open Dental, we then head to the PatientXpress Dashboard by clicking on the blue PX button.

PatientXpress.

### PatientXpress Dashboard

There is an update available when there is red text flashing at the top of the dashboard with an update button. [Note]: The update will fail if Open Dental is not ran as an Administrator.

Please click the update button. A window will display once the update is done. Restart Open Dental as normal and verify that it updated.

If it did not, please contact the PatientXpress support team to assist you.
